What is a Top Fuel Motorcycle? | Dragbike.com

That motorcycle between the years 1977 to 1979 changed Top Fuel motorcycle class drag racing forever. It ended the era of double engine Top Fuel bikes because there was no way the ponderous weight of a double could get off the starting line and accelerate as quickly as a single, which at the time, was near half the weight of Top Fuel double.

Test Shows Top Fuel Engine Makes 11,000+ Horsepower

Top Fuel dragsters are the quickest accelerating racing cars in the world and the fastest sanctioned category of drag racing, with the fastest competitors reaching speeds of 335 miles per hour and finishing the 1,000 foot runs in 3.62 seconds. A top fuel dragster accelerates from a standstill to 100 mph in as little as 0.8 seconds and can exceed 280 mph in just 660 feet. This subjects the driver to an average acceleration of about 4.0 g0 over the

duration of the race and with a peak of over 5.6

Top Fuel - Wikipedia

It is a fact that you always drain a higher volume of fluid compared to volume of oil put in, because the oil is diluted by the nitromethane fuel. Compared to street vehicles, Top Fuel engines generally operate with larger piston to wall clearances and the amount of injected fuel per cycle is approx 4 times as much as a petrol / gasoline driven engine (on full power at max rpm our engine swallows approx 12 gallons per minute).
