Books like touching a nerve are difficult to find. It touches on a hard-to-access topic, full of technical jargon and many sensitive issues and yet, manages to be surprisingly comprehensible, highly educative on a wide range of topics, respectful on delicate matters and all in all a very entertaining read. The main subject is the science of the brain and how the three-pound mass of jelly (as Ramachandran likes to put it) was engineered by evolution and how it makes

The nerve endings are remarkably sensitive. They can be triggered by the slightest movement of the hairs. Signals from touch receptors pass via sensory nerves to the spinal cord, where they synapse, or make contact with, other nerve cells, which in turn send the information to the

pain, vibrations, and more.

*Sense of Touch, Skin
Receptors, Skin Sensations*

...

So how does a quick journey from the touch receptors in your skin to your brain happen? When the touch, pain or heat sensors in your skin are stimulated, they send electrical pulses to your neurons, special cells that relay electrochemical impulses [source: A.D.A.M.]. The sensory neurons then act as a relay team, passing along the electrical pulse from neuron to neuron until

it reaches your spinal cord.

How Touching Works /

HowStuffWorks

Churchland appreciates that the brain-based understanding of the mind can unnerve even our greatest thinkers. At a conference she attended, a prominent philosopher cried out, "I hate the brain; I hate the brain!" But as Churchland shows, he need not feel this way.
