~~Ans: A mixture is a material composed of two or more simpler substances in chemistry. Such materials can be compounds or chemical elements. A mixture of liquids, solids, or gases can be produced. When sugar is put in water, for example, it forms a mixture, then it dissolves to create a solution.~~

~~What is a Mixture? Definition, Properties, Examples ...~~

~~A mixture is defined as the result of combining two or more substances, such that each maintains its chemical identity. In other words, a chemical reaction does not occur between components of a mixture. Examples include combinations of salt and sand, sugar and water, and blood.~~

~~Mixture Definition and Examples in Science~~

~~Mixtures A mixture contains different substances that are not chemically joined to each other. For example, a packet of sweets may contain a mixture of different coloured sweets.~~

~~Mixtures Pure and impure chemical substances -K53 ...~~

~~The definition of a mixture is a combination of different things that are not chemically bonded. For example, when we bake a cake, it's a result of a mixture of eggs, flour, sugar, and other ingredients. Mixtures can also be much simpler than that. Any time two or more items are combined, a mixture is formed.~~

~~Examples of Mixtures -YourDictionary.com~~

~~A mixture is what you get when you combine two substances in such a way that no chemical reaction occurs between the components, and you can separate them again. In a mixture, each component maintains its own chemical identity.~~

~~What Is a Mixture in Chemistry? -ThoughtCo~~

~~A mixture is the result of combining two or more substances that do not react chemically. In order for a solution or combination to be labelled as a mixture, it must be possible to separate the individual components through physical means, without resorting to chemical reactions.~~

~~What Are Mixtures in Science? -Reference.com~~

~~A mixture is a substance made up of the mixing of other substances or compounds together. they can be separated easily into their constituent elements. all the elements present in the mixture are distinct. their boiling and melting point s are not constant. 11 Common Examples of Mixtures The mixture of salt and paper the mixture of sand and water~~

~~Difference Between Compound And Mixture | Guidance Corner~~

~~Elements, Mixtures and Compounds Chemistry is the study of physical matter, which is classified in many different ways, such as state of matter (gas, liquid or solid), chemical form (element, mixture or compound), chemical structure (atoms or molecules, etc.) and so on.~~

~~Elements, Mixtures and Compounds - School Chemistry~~

~~Definition of Mixture When two or more substances are put together, in any ratio such that no chemical reaction takes place, the material comes out, is a mixture. For example - Sand and water, sugar and salt, air, etc. In a mixture, the properties of the components are retained even after they are mixed, as a solution, suspension and colloids.~~

~~mixture | meaning of mixture in Longman Dictionary of ...~~

~~What is a Mixture Mixtures consist of two or more substances which can be separated by physical or chemical means. The components of a mixture are not chemically bonded, but physical attractions may be present. This is the reason for their easy separation by processes like filtration, distillation, chromatography, extraction and centrifugation.~~

~~Difference Between Pure Substance and Mixture | Definition ...~~

~~A mixture is a substance made by combining two or more different materials in such a way that no chemical reaction occurs. A mixture can usually be separated back into its original components. Some examples of mixtures are a tossed salad, salt water and a mixed bag of M&M's candy. What is the difference between a compound and a molecule?~~

~~Questions and Answers -What is a mixture?~~

~~In chemistry, a mixture is a material made up of two or more different substances which are physically combined. A mixture is the physical combination of two or more substances in which the identities are retained and are mixed in the form of solutions, suspensions and colloids. Mixtures are one product of mechanically blending or mixing chemical substances such as elements and compounds, without chemical bonding or other chemical change, so that each ingredient substance retains its own chemica~~

~~Mixture -Wikipedia~~

~~A system which consists of two or more substances (solid, liquid, or gas) present in any proportions in a container. There is no chemical bonding between substances. A mixture can be separated using physical methods. The formation of a mixture does not involve a change in temperature.~~

~~Mixture -definition of mixture by The Free Dictionary~~
