...

4 major types of crude oil. The four principal types of oil are: Very light oil; This type tends to be very volatile, evaporating in just a few days, which makes it less toxic. Very light oil is mainly used in the following crude oil products: gasoline, jet fuel, petroleum spirit, kerosene, petroleum ether and petroleum naphtha. Light oil; This type is moderately toxic and volatile.

~~4 major types of crude oil | Capital.com~~

Viscosity refers to an oil's resistance to flow. Volatility refers to how quickly the oil evaporates into the air. Toxicity refers to how toxic, or poisonous, the oil is to either people or other organisms. When spilled, the various types of oil can affect the environment differently. They also differ in how hard they are to clean up.

~~Oil Types | response.restoration.noaa.gov~~

Synthetic oil is designed to be more effective at resisting breakdown (and because of that, it lasts longer) and withstanding high temperatures. There are situations where that resistance to...
