characters per second, or one every 833 μs. The DMA therefore "steals" every 833rd cycle. This slows down the processor can only devote 5% of its time to I/O. Thus the maximum I/O instruction execution rate is 106 × 0.05 = 50,000 instructions per second. The I/O

William Stallings - Operating systems - Instructors Manual. William Stallings isn't the most recommend book for Operating Systems. But if you followed William Stallings for Computer Organization, go for this one. If not, Andrew S Tanenbaum's Modern Operating Systems would be a good thing to follow. Explained concepts clearly and in my opinion, it's the best book for Operating Systems
