Read PDF Winterizing Mercury Inboard Engine

In Canada, it is very important to properly winterize marine equipment. Particularly inboard engines. If an engine is left full of water, and it freezes it will crack the block. an engine with a cracked block will need to be rebuilt, or replaced, and can cost upwards of \$10,000.00.

quarts of TC-W3 two-stroke oil and five ounces of fuel stabilizer.

Winterizing Freshwater-Cooled Engines | Boating Magazine

You must winterize your MerCruiser 4.3L V6 before storing it. The engine sucks water up from the lake through the impeller to cool the engine. This water does not automatically drain out of the engine. Because water expands when it freezes, it's imperative to drain the water from the engine. The carburetor also needs special attention.

How to Winterize the

*MerCruiser 4.3L V6 | It
Still Runs*

Before putting your boat away for the winter, you must first winterize the motor. Your Mercruiser 3.0 uses the water in the lake to cool the engine while boating. This water stays inside the engine. Failure to remove the water will cause freezing. As the water freezes, it expands. This will cause the engine block to crack.

Storage and Winterization / Mercury Marine

To do a complete winterization, you MUST be able to run the engine and bring it up to operating temperature. To do this, your boat must be in the water or be attached to a water supply via a hose and suitable adaptor that will allow an uninterrupted supply of water to the engine. STEP 2

For direct fuel injected
(DFI) two-stroke engines
such as Mercury OptiMax
models, instead of using
fogging oil, squirt one
ounce of DFI outboard oil
into each cylinder through
the spark plug hole. A small
oil can with a long flexible
neck works well for this
task.

Mercury Dockline | How to Winterize Your Outboard ...
Winterizing Mercury Inboard Engine Follow the directions for winterization and fuel stabilization in your engine owner's manual. Some people prefer to "fog" the engine. With the engine running at a high idle (with a water hose hooked up for cooling of course), slowly pour a quart of Marvel Mystery Oil down the throat of the carburetor.
