interval system scan the
line for theft detection.
Page 23/36

Take the data from wireless data receiver at preset time interval (10min). It represents power consumed by load over given time. Take the data from meter installed on pole at the same time. It will represent the power sent over that line for preset value (10min).

International Journal of Innovative Research in Page 24/36

Science ... Detection While coming to the part of Theft-identification. there are 2 stages of Detection: Alarm beep, with message alert Fine levied, with message intimation. Stage-1: The electricity board will transmit energy via RF-Transmitter which has to be received by RF-Receiver at user-end.

Wireless Power Theft **Detection International** Journal Of Electrical power theft detection system is used to detect an unauthorized tapping on transmission lines. Existing system is not able to identify the exact location of tapping. This Page 31/36

system actually finds out on which electrical line there is a tapping. This is a real time system. Wireless data transmission and receiving technique is used.

This project is named Wireless Power Theft Monitoring System' is focusing on how to detect and monitor the Electricity Theft at a remote KSEB location. The proposed system prevents the illegal usage of electricity. At this Page 34/36

point of technological development the problem of illegal usage of electricity can be solved electronically.
