The development of the WISC-IV was significantly influenced by current research into neurocognitive information processing models, and the creation of new subtests was equally guided by clinical research and factorial data. The Wechsler four-factor structure was first introduced as an option within the WISC-III (1991) and subsequently included in the WAIS-III (1997). The WISC-IV (2003) strengthens the Wechsler four-factor model, and removes its status as optional.

Wechsler Intelligence Scale for Children | Fourth Edition

The Wechsler Intelligence Scale for Children (WISC), developed by David Wechsler, is an individually administered intelligence test for children between the ages of 6 and 16. The Fifth Edition (WISC-V; Wechsler, 2014) is the most recent version. The WISC-V takes 45-65 minutes to administer.

Wechsler Intelligence Scale for Children - Wikipedia

The Wechsler Intelligence Scale for Children (WISC) has been around since 1949 as an adaptation of David Wechsler's 1939 Wechsler-Bellevue Intelligence Scale. This version of the Wechsler test is a psychological assessment that measures different aspects of intelligence and is designed for children
